Prerequisites for Publication

Authorship: The Editors of *Japanese Journal of Radiology* adhere to recommendations of the International Committee of Medical Journal Editors [http://www.icmje.org] regarding criteria for authorship.

Accordingly, each person listed as an author or coauthor for a submitted report (excepting Review articles) must meet all three criteria. An author or coauthor shall have:

1. Conceived, planned, and performed the work leading to the report, or interpreted the evidence presented, or both;
2. Written the report or reviewed successive versions and participated in their revision;
3. Approved the final version.

Meeting these criteria should provide each author with sufficient knowledge of and participation in the work to allow him or her to accept public responsibility for the report.

Certification: This Certification Form should be signed and submitted with the manuscript. The senior or corresponding author is requested to certify that all listed authors qualify for authorship according to the above three criteria. The author(s) should also certify that: no part of the work described has been published before [except in the form of an abstract or as part of a published lecture, review, thesis, or dissertation (appropriately cited)]; that the work is not under consideration for publication elsewhere; that the work is not under consideration for publication elsewhere; that if and when the manuscript is accepted for publication, the author(s) agree to automatic transfer of the copyright to the Japan Radiological Society; and that the manuscript, or its parts, will not be published elsewhere subsequently in any language without the consent of the copyright holders.

Animal and human research: Research involving humans must be carried out in accordance with the ethical standards of the responsible committee (institutional or regional) or with the Helsinki Declaration. Studies involving animal experimentation must include a statement of compliance with the guidelines of the author's institution or the National Research Council's criteria (NIH No. 86-23).
